Damian Świstowski

damian@swistowski.org | +44 7402 642869 | Eastbourne, UK | LinkedIn | GitHub

Backend and platform engineer working mainly in Python. I build and improve distributed systems, data platforms, and developer tooling, usually where reliability and operability need work. My recent work covers financial workflow automation, blockchain indexing, and TypeScript product development.

Core Skills

Python backend engineering | Distributed systems | Data pipelines and indexing | Platform architecture | Production reliability | Developer tooling

Technology

Languages Python | TypeScript | JavaScript
Backend FastAPI | Restate | Django | GraphQL
Data & Storage PostgreSQL | BigQuery | Redis | Elasticsearch | Kafka
Cloud & Infrastructure Kubernetes | Terraform | AWS | ECS
Workflow & Data Processing Temporal | Bytewax | Pydantic AI
Other Logfire | Browserbase | Playwright | React | Next.js

Professional Experience

Apr 2026 - Aug 2026

Staff Software Engineer

Waycore, London / Remote

- Moved to Waycore following the Rated and Figment business split, continuing work on the successor product.
- Build Python and TypeScript features for financial workflow automation, including AI-assisted browser integrations, execution validation, and operator feedback.
- Work across FastAPI and Restate services, Next.js product surfaces, and AWS infrastructure, with a focus on reliability and operability.

Stack: Python | FastAPI | Restate | PostgreSQL | Pydantic AI | Logfire | Browserbase | Playwright | TypeScript | Next.js | Terraform | AWS

Oct 2025 - Apr 2026

Staff Software Engineer

Figment, London / Remote

- Joined through the acquisition of part of Rated and continued work on its blockchain indexing platform.
- Moved indexers from ECS and Bytewax to Kubernetes and Temporal, improving their reliability, maintainability, and ability to scale horizontally.

Stack: Python | PostgreSQL | Web3 | Temporal | BigQuery | Terraform | Kubernetes

Oct 2024 - Oct 2025

Staff Software Engineer

Rated Labs Ltd, London / Remote

- Led a major refactor of the Ethereum indexer, rewriting the codebase to make it easier to observe, test, and scale horizontally.
- Improved deployment automation, monitoring, and production support across other indexers.
- Built a reusable framework for indexers and data pipelines, including tooling to generate and synchronise BigQuery, Protobuf, and Aurora integrations.

Stack: Python | PostgreSQL | Web3 | Bytewax | BigQuery | Ansible | ECS

Oct 2023 - Oct 2024

Software Engineer

Genie AI, Remote

- Built and operated Python backend services for asset metrics and integrations with Deribit, OKX, and Solana.
- Automated delivery pipelines and simplified dependency builds, making everyday development and releases less painful.

Stack: Python | FastAPI | Kubernetes | Terraform | PostgreSQL | TypeScript | React | GraphQL

Staff Engineer / Engineering Manager / Senior Software Engineer

2019 - 2023

Babylon Health, London

- Progressed from Senior Software Engineer to Engineering Manager and then Staff Engineer across three generations of Babylon's conversation platform.
- Designed the move from the first-generation monolith to a microservices architecture, then delivered the third-generation platform for asynchronous messaging.
- Managed 3 to 6 engineers, working with product managers and stakeholders to turn roadmap needs into practical delivery plans.
- Built GraphQL and REST APIs and created COPTeR, a domain-specific test runner for stable, product-wide acceptance testing.

Stack: Python | FastAPI | Flask | Kubernetes | Terraform | PostgreSQL | Redis | Elasticsearch | Kafka | TypeScript | GraphQL

Senior Software Engineer

2019

B2C2, London

- Built a trade-history collection system and exchange API integrations for market-data ingestion and processing on AWS.

Stack: Python | AWS Lambda | SQS | ElastiCache

Senior Python Developer

2017 - 2019

Springer Nature, London

- Built internal CI/CD and deployment tooling, led Python 2 to Python 3 migrations, and simplified build pipelines used by engineering teams.

Stack: Python | OpenStack | Cloud Foundry | Celery

Earlier Software Engineering Roles

2007 - 2017

Shortlist, ZedMedia, Intelligent Elite, OMS, and Gery Design, UK, Europe, and Remote

- Built backend services, publishing and A/B testing systems, analytics, mailing infrastructure, and production-management software.
- Designed data models, worked on legacy migrations, and led a team of 4 junior engineers at OMS.

Stack: Python | Django | PostgreSQL | MySQL | MongoDB | Solr | JavaScript | PHP

Education

Master of Computer Science

2005 - 2007

University of Silesia, Katowice

Talks

- **Typed attrs dataclasses with cattrs converters for JSON REST microservices**, PyCon UK (2019)
