damian@swistowski.org | +44 7402 64 28 69 | LinkedIn | GitHub

Staff-level software engineer with 15+ years of experience building backend systems, data platforms, and distributed applications. Most of my recent work has been in Python, with a mix of platform design, production operations, data pipelines, and TypeScript product work. I tend to work best on messy systems that need clearer architecture, better reliability, and a practical path to delivery.

Core Skills

Python backend engineering | Distributed systems | Data pipelines and indexing | Cloud-native platforms | API design | Observability and testing | CI/CD and developer tooling | Production operations

Technology

Languages Python | TypeScript | JavaScript | PHP | Perl

Backend FastAPI | Restate | Flask | Django | Django REST Framework

Data & Storage PostgreSQL | BigQuery | Redis | Elasticsearch | Kafka | MySQL | MongoDB | Solr

Cloud & Infrastructure Kubernetes | Terraform | AWS Lambda | AWS SQS | AWS ElastiCache | ECS | OpenStack | Cloud Foundry

Workflow & Data Processing Temporal | Bytewax | Pydantic AI

Other Web3 | GraphQL | React | Next.js | React Native | Angular | Ansible | Logfire | Browserbase | Playwright

Professional Experience

Staff Software Engineer

Apr 2026 - Present

Waycore, London / Remote

- Building backend and product-platform features for financial workflow automation, with a focus on API design, production behaviour, and clear operational feedback.
- Developing AI-assisted and browser-driven integrations for complex customer workflows, including execution, validation, and observability.
- Working across Python services, TypeScript product surfaces, and AWS infrastructure to make the system easier to ship and easier to operate.

Stack: Python | FastAPI | PostgreSQL | Restate | Pydantic AI | Logfire | Browserbase | Playwright | TypeScript | Next.js | React | Terraform | AWS | ECS

Staff Software Engineer

Oct 2025 - Apr 2026

Figment, London / Remote

- Led the integration of Rated indexers into Figment infrastructure and helped align the architecture with the wider platform direction.
- Moved existing indexers onto the new Figment stack, including ECS to Kubernetes and Bytewax-based execution to Temporal.
- Improved reliability, maintainability, and scaling for indexing systems used by blockchain data products.

Stack: Python | PostgreSQL | Web3 | Temporal | BigQuery | Terraform | ECS | Kubernetes

Staff Software Engineer

Oct 2024 - Oct 2025

Rated Labs Ltd, London / Remote

- Led a major refactor of the Ethereum indexer, rewriting the codebase to make it easier to observe, test, and scale horizontally.
- Improved deployment automation, monitoring, and production support practices across other indexers.
- Built a reusable framework for indexers and data pipelines, including tooling to generate and synchronise integrations for BigQuery, Protobuf, and Aurora.

Stack: Python | PostgreSQL | Web3 | Bytewax | BigQuery | Ansible | ECS

Software Engineer

Oct 2023 - Oct 2024

Genie AI, Remote

- Built backend services with an emphasis on testability, maintainability, and getting changes safely into production.
- Automated the delivery pipeline and simplified dependency builds to make day-to-day development less painful.
- Integrated platform components with multiple exchanges and blockchains, including Deribit, OKX, and Solana.
- Expanded the asset metrics portfolio while keeping calculation pipelines efficient and scalable.

Stack: Python | FastAPI | Kubernetes | Terraform | PostgreSQL | TypeScript | React | GraphQL | REST APIs

Staff Engineer

2022 - 2023

Babylon Health, London

- Designed and delivered the third generation of Babylon's conversation platform for asynchronous messaging.
- Developed a GraphQL API for northbound traffic and a REST API for east-west service communication.
- Created COPTeR (Conversation Platform Test Runner), a domain-specific testing tool enabling stable, product-wide acceptance testing integrated with Babylon's testing infrastructure.

Stack: Python | FastAPI | Kubernetes | Elasticsearch | Kafka | TypeScript | React Native | GraphQL | REST APIs

Engineering Manager

2020 - 2022

Babylon Health, London

- Managed 3 to 6 direct reports and supported team growth through coaching, pairing, and knowledge-sharing.
- Worked with product managers and stakeholders to turn roadmap needs into delivery plans the team could actually execute.
- Led the transition from the first-generation conversation platform to the second generation without service disruption.
- Kept engineering standards high, including SSDLC compliance and operational practices.
- Balanced short-term delivery pressure with long-term maintainability.

Stack: Python | Flask | Kubernetes | Terraform | PostgreSQL | Redis | Kafka | TypeScript | REST APIs

Senior Software Engineer

2019 - 2020

Babylon Health, London

- Designed the migration strategy from a first-generation monolith to a second-generation microservices architecture for the conversation platform.
- Built CLI tooling to simplify internal and external integrations with the Conversation Platform.

Stack: Python | Flask | Kubernetes | Terraform | PostgreSQL | Redis | Kafka | REST APIs

Senior Software Engineer

2019

B2C2, London

- Designed and built a trade history collection system for market data processing.
- Implemented a REST API crawler as a cloud task and processed raw data through stateless workflows.
- Integrated with multiple exchange APIs to support data ingestion.

Stack: Python | AWS | Lambda | SQS | ElastiCache

Senior Python Developer

2017 - 2019

Springer Nature, London

- Built and improved internal CI/CD systems and engineering tooling.
- Led migration efforts from legacy Python 2 systems to Python 3.
- Defined simplified build pipelines to help teams improve delivery workflows.
- Developed deployment tooling for Cloud Foundry environments.

Stack: Python | OpenStack | Cloud Foundry | Celery

Senior Engineer

2015 - 2017

Shortlist, San Francisco / Remote

- Built backend services and REST APIs and designed the core data model.

Stack: Python | Django | PostgreSQL

Senior Python Developer

2012 - 2015

ZedMedia, Global / Remote

- Built Django apps for publishing workflows, a ranking algorithm, and A/B testing tooling.

Stack: Python | Django | PostgreSQL | JavaScript | Perl

Senior Python Developer

2010 - 2012

Intelligent Elite, Barcelona

- Built an A/B testing suite, behaviour analytics, and mailing infrastructure.

Stack: Python | Django | PostgreSQL | Solr | MongoDB

2008 - 2010

Python Developer

OMS, Bielsko-Biała, Poland

– Designed and implemented a production management system and led a team of 4 junior engineers.

Stack: Python | MySQL

2007 - 2008

Junior PHP Developer

Gery Design, Wrocław, Poland

– Migrated legacy PHP projects to Django and maintained client projects.

Stack: PHP | JavaScript | Python | Django

Education

2005 - 2007

Master of Computer Science

University of Silesia, Katowice

Thesis: Particle Swarm Optimisation in function minimisation

2002 - 2005

Bachelor of Computer Science

University of Silesia, Katowice

Thesis: Developing an electronic repository for undergraduate theses

Publications

2006

Comparative Study: ACO and EC for TSP

KAEIOG

Talks

– **Typed attrs dataclasses with cattr converters for JSON REST microservices**, PyCon UK (2019)

Interests

Hiking | Social dancing | Cooking | Video games
